

# Borogard® ZB

## 在定向刨花板中的应用

保护用硼酸锌

使用 *Borogard ZB* 处理定向刨花板 (OSB), 不仅加工方式方便, 而且是经证明可长期有效保护定向刨花板 (OSB) 的唯一处理方法。

Oriented strand board (OSB) is the board of choice for architects, engineers, and specifiers. Low cost and high performance are the hallmarks of this engineered building material, most often used for roof, wall, and floor sheathing. Sustainability is another – OSB makes more efficient use of wood fiber than any other sheathing product.

Despite the fact that OSB is known for its many strengths, it does have one potential weakness. Like any wood product, untreated OSB is vulnerable to termites, decay fungi, and other wood destroying organisms.

The best way to protect OSB – and in the process, protect homes and other structures built with OSB – is to build protection into the batch with *Borogard ZB*, the leading zinc borate treatment. Treating OSB with *Borogard ZB* – is not only the best treatment available, it's also the only treatment that has proven effective in protecting OSB over time.

Here are the facts about how *Borogard ZB* protects one of the world's best building materials from its worst enemies:

- **Cost effective protection.** *Borogard ZB* costs less and works better than any other OSB treatment on the market. Moreover, OSB treated with *Borogard ZB* is nearly 10 times less expensive than pressure-treated plywood.
- **Complete protection.** Scanning electron microscopy – which allows scientists to look at OSB at 50X magnification – shows that *Borogard ZB* is dispersed evenly throughout the OSB – unlike other treatments where the preservatives protect only a fraction of the entire board. Moreover, *Borogard ZB* is stable and doesn't disperse or evaporate.

- **Compatible protection.** Preservative levels of *Borogard ZB* (from 0.75% to 1.5%) do not affect the physical properties of OSB. Data shows that OSB treated with *Borogard ZB* maintains its strength with the full spectrum of adhesives, including MDI and PF adhesives. *Borogard ZB* also provides natural protection against metal corrosion, unlike other, untested OSB preservatives.
- **Broad spectrum protection.** Composite products treated with *Borogard ZB* resist every type of decay fungi they've been tested against, including copper-tolerant fungi. Composite products treated with ammoniacal copper have not. In fact, they have proven ineffective against copper-tolerant fungi.
- **Lasting protection.** *Borogard ZB* was developed more than a dozen years ago specifically to provide lasting protection to wood composites. More than a decade of lab and field research proves that *Borogard ZB* can stand the test of time, unlike newer treatments. In fact, zinc borate treatment is typically used as the benchmark against which other preservatives are measured, and is the only wood composite treatment recognized as effective by the American Wood Protection Association (AWPA).
- **Safe protection.** *Borogard ZB* is deadly for termites and decay fungi, but safe for people, pets, and the environment. No special tools, handling, or disposal are required when working with OSB treated with *Borogard ZB*.
