

Neobor®

+

Optibor® mixtures

## Maximum solubility based on typical analysis

### Example explanation

To determine the solubility and composition of a mixture of *Neobor*® (borax 5 mol) and *Optibor*® (boric acid) at 30°C.

Proceed along the horizontal ordinate to 30°C. Read upward to the lower line labeled “% Solubility of Mixture,” and then across to where the vertical ordinate reads 30% by weight is given as the maximum solubility.

To determine the ratio of the two components at this temperature and at this solubility, proceed along the horizontal ordinate to the 30°C temperature as above and read upward to the top line which gives the composition of the mixture and then across. In this example, it reads that this mixture contains 57% *Neobor* and 43% *Optibor*.

# TECHNICAL BULLETIN

## Neobor and Optibor mixtures

### Solid mixtures based on typical analysis of technical grade products

Wt %		Mole ratios		Boric oxide content
Neobor	Optibor	$\text{Na}_2\text{O}/\text{B}_2\text{O}_3$	$\text{B}_2\text{O}_3/\text{Na}_2\text{O}$	Wt % $\text{B}_2\text{O}_3$

#### About U.S. Borax

U.S. Borax, part of Rio Tinto, is a global leader in the supply and science of borates—naturally-occurring minerals containing boron and other elements. We are 1,000 people serving 650 customers with more than 1,800 delivery locations globally. We supply around 30% of the world's need for refined borates from our world-class mine in Boron, California, about 100 miles northeast of Los Angeles.

#### About 20 Mule Team products

U.S. Borax produces the 20 Mule Team® borates family of products from naturally occurring minerals and have an excellent reputation for purity and safety when used as directed. Borates are key ingredients in a number of industrial applications including fiberglass, glass, ceramics, batteries and capacitors, wood preservatives, and flame retardants.

High quality, high reliability, high performance borate products. It's what we're known for.
